

Custom Modular Utility Solutions

Experienced

Systecon has been analyzing hydronic systems and developing integrated systems to fit our customers' needs for five decades and was first in the industry to develop a modular chiller plant.

Innovative

Systecon leads the industry in developing new technologies, like Wire-to-Water Efficiency, VariPrime® variable primary pumping, and CritiChill® modular indirect evaporative cooling, which improve system reliability and efficiency, while saving customers time and facility space as well as installation and operating costs.

Customer Focused

Systecon works directly with owners, engineers, and contractors. Our top priority is to provide the highest quality, custom solution to fit your needs and budget, while making sure you retain control over the design and implementation of your project. Plus, with our combined mechanical and electrical designs, we can guarantee performance that meets or exceeds standard industry practices.

Products

- Custom Modular Central Plants*
 - Chiller Plants
 - Hot Water Boiler Plants
 - Steam Boiler Plants
 - Cogeneration Plants
- Custom Modular Pumping Systems* including VariPrime®
- CritiChill® Modular Indirect Evaporative Cooling
- Central Plant Controls and Interactive Optimization
- Standard Pump Packages

**indoor or outdoor application*

Services**

- Installation
- Corrective Services
- Preventive Maintenance (monthly, quarterly or annually)
- Energy Management Solutions
- Controls Monitoring
- Upgrade and Retrofit

***optional*

Markets

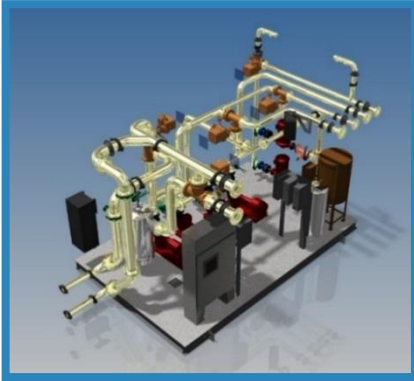

- Data Center and Mission Critical
- Industrial and Process
- Hospital and Medical
- Government and Office Building
- K-12 and Higher Education
- Gaming and Entertainment
- Retail

As a custom manufacturer, Systecon can meet project specifications for *your* market, including redundancy, controls, footprint and service requirements.

An ENGIE company

What Sets Us Apart

We take great pride in the quality of the systems we manufacture and the value that provides our customers.

Quality & Reliability

- Industry leading construction standards
- Most respected parts and equipment suppliers
- Designed and built by professionals
- Factory tested and UL certified
- Performance guarantee
- System control verification and validation

Customization

- You choose the components
- You retain control over the design and implementation of your system
- Systecon creates a system specific to your budget and project needs

Single Source Responsibility

- Systecon sources and manages all components
- Less risk to the installer, designer and owner
- Easier project management
- Single-source warranty
- Nationwide service

Cost Savings

- Accurate, up-front pricing
- Factory labor & efficiencies
- Less field labor required
- Efficiently designed systems save operating and maintenance costs

Time Savings

- Shorter lead time
- Built in parallel with other construction
- Single point connections
- Simplified field installation and start-up

Space Savings

- Pre-planned and engineered
- Designed with smallest footprint
- Space for maintenance and expansion
